

SAI VARDHAN REDDY MACHANAGARI

IBM BAW Developer | Process Automation & ECM Specialist

CAREER SUMMARY

IBM BAW Developer with 3 years of experience in designing, developing, and deploying end-to-end Business Process Management (BPM) and workflow automation solutions. Deep technical expertise across **IBM Business Automation Workflow (BAW v24.0)** and **IBM BPM (v8.6)**, including Process Designer, Business Process Definition (BPD) modeling, Coach Views, Human Tasks, Undercover Agents (UCAs), and Business Rules. Skilled in orchestrating complex enterprise processes, consuming REST/SOAP APIs to integrate core banking systems, and connecting IBM BAW with **IBM FileNet P8** repositories for automated document management in Agile environments.

KEY CAPABILITIES

- **IBM BAW & BPM Orchestration:** 3 years of hands-on experience modeling business processes using BPDs, process flows, Human Tasks, Gateways, System Tasks, and Exception Handling in IBM BAW and IBM BPM.
- **User Interface & Coach Development:** Expert in designing responsive UI interfaces, Custom Coach Views, Client-Side Human Services (CSHS), Heritage Coaches, and Client-Side/Server-Side scripts.
- **Integrations & REST APIs:** Proficient in developing Service Flows, consuming RESTful/SOAP Web Services, Java Integration services, and connecting BAW to external databases (Oracle, SQL Server) and middleware components.
- **FileNet P8 Repository Integration:** Strong expertise in linking BAW process instances to IBM FileNet P8 repositories using ECM REST APIs, Content Engine Java APIs, and ICN interfaces for automated document ingestion and retrieval.
- **Process Rules & Event Handling:** Hands-on experience with BAL/ILOG Business Rules, Decision Services, Undercover Agents (UCAs), Message Events, and Timer Events.
- **FileNet & Process Engine Knowledge:** Proficient in Process Designer, Process Configuration Console (PCC), custom Work Queues, In-Baskets, Object Stores, Document Classes, and security governance (ACLs/ACEs).
- **System Diagnostics & Performance Tuning:** Skilled in troubleshooting BAW Process Portal issues, analyzing SystemOut/SystemErr logs, performance tuning process instances, and performing Root Cause Analysis (RCA).
- **REST APIs & Performance:** Proficient in building and consuming RESTful APIs to deliver high-performance, secure backend services for process and content management.
- **System Diagnostics & RCA:** Adept at rapid troubleshooting, log analysis, and root cause analysis across FileNet, BAW/BPM, and custom Java application layers.
- **Multi-Format Ingestion:** Experienced in content processing, document extraction, and bulk ingestion from sources like PDFs, Excel files, and email repositories.
- **Agile Scrum Practices:** Active participant in Agile/Scrum ceremonies, including Sprint Planning, Daily Stand-ups, Backlog Refinement, and Retrospectives.
- **SDLC & ECM Architecture:** Comprehensive knowledge of SDLC phases, ECM architectural patterns, testing methodologies, and enterprise coding standards.
- **Cross-Functional Collaboration:** Strong problem-solving, analytical, and stakeholder management skills to deliver business-driven ECM solutions across teams.

SOFTWARE PROFILE & PLATFORMS

- **BPM & Automation:** IBM Business Automation Workflow (BAW v24.0), IBM BPM (v8.6), Process Designer, IBM Process Portal, Process Admin Console.
- **ECM Platforms:** IBM FileNet P8, Content Engine (CE), Process Engine (PE), IBM Content Navigator (ICN).
- **Programming & Web:** Java, J2EE, JavaScript, HTML5/CSS3, RESTful APIs, SOAP Web Services.
- **Databases & Tools:** Oracle DB, MS SQL Server, Process Configuration Console (PCC), ACCE, SOAPUI, Postman.

WORK EXPERIENCE

Eidiko Systems Integrators Pvt. Ltd. | IBM FileNet Developer | Present

- Designing, developing, and supporting enterprise-grade business process applications using IBM Business Automation Workflow (BAW) and IBM BPM.
- Modeling Business Process Definitions (BPDs), Client-Side Human Services, Service Flows, and custom Coach Views for core banking and enterprise clients.
- Integrating IBM BAW process applications with core backend systems, Oracle databases, and IBM FileNet P8 content repositories via RESTful APIs and Java adapters.
- Participating in process optimization, SLA configuration, exception handling setup, and multi-environment deployments across SIT, UAT, and Production.

PROFESSIONAL EXPERIENCE - CLIENT & PROJECT DETAILS

Project: Digital Automation for Conventional Services – Ahli Bank

Role: BPM Developer

Technology: IBM BAW (v24.0), IBM BPM (v8.6), IBM FileNet P8, Java, REST APIs, SQL Server

Responsibilities:

- Architected and developed automated process flows in IBM BAW for managing conventional banking service requests and approvals.
- Designed custom reusable Coach Views using JavaScript and HTML/CSS to standardize user forms across different service request types.
- Built integration layers consuming REST services and microservices to fetch customer profiles and push transaction statuses to external banking databases.
- Configured multi-level approval hierarchies, routing tasks dynamically based on transaction value and user authority levels.
- Integrated BAW with FileNet Object Stores and Document Classes to manage service request attachments and supporting audit trails.
- Implemented global exception handling sub-processes in BAW to capture service invocation failures without losing process state.
- Performed log analysis, root-cause analysis (RCA), and process instance migration activities in Process Admin Console.

Project: Digital Automation for Islamic Services – Ahli Bank

Role: BPM Developer

Technology: IBM BAW (v24.0), IBM BPM (v8.6), IBM FileNet P8, Java, REST APIs, SQL Server

Responsibilities:

- Developed end-to-end IBM BAW process applications supporting Islamic Account Services, including request initiation, validation, multi-tier approval, and fulfillment.
- Implemented multi-level manager and authorizer approval workflows incorporating strict Islamic banking compliance business rules.
- Integrated BAW process flows with IBM FileNet P8 for automated cheque book request document creation, storage, and retention policy enforcement.
- Designed Client-Side Human Services with custom tracking variables to monitor SLA performance and task bottleneck reports in Process Portal.
- Developed Java integration components and REST service connectors to validate customer data against core banking backend APIs.
- Configured FileNet Workflows and Process Engine queues via Process Designer to handle specialized document routing alongside BAW process flows.
- Supported system integration testing (SIT), user acceptance testing (UAT), and prepared technical runbooks for production releases.

Project: Conventional Account Opening – Ahli Bank

Role: BPM Developer

Technology: IBM BAW (v24.0), IBM BPM (v8.6), IBM FileNet P8, Java, REST APIs, SQL Server

Responsibilities:

- Modeled end-to-end BPDs for Conventional Account Opening, defining process steps, routing gateways, human tasks, and automated system services.
- Developed responsive Coach Views and Client-Side Human Services (CSHS) to enable seamless customer data entry and validation for bank operators.
- Integrated BAW process instances directly with IBM FileNet P8 using ECM REST APIs to upload and retrieve customer identification documents in real-time.
- Configured Decision Tasks and Business Rules to automate eligibility checks and route applications to appropriate approval tiers.
- Implemented Undercover Agents (UCAs) and boundary timer events to handle asynchronous system updates and SLA escalations.
- Built service flows to exchange account details between BAW human tasks and core banking databases.
- Conducted unit testing, SIT, UAT defect resolution, and performance optimization on Process Portal execution.

EDUCATION QUALIFICATION

Bachelor of Technology (B.Tech)

Marri Laxman Reddy Institute Of Technology and Management, Hyderabad, Telangana.
